

PRODUCT BRIEF

Intel® SSD D5-P4320
Data Center, PCI Express*

Intel® QLC 3D NAND SSD with PCIe* Large, Affordable Capacity. Reliable Storage.

Intel delivers the industry's first PCIe* QLC 3D NAND SSD for the Data Center¹ – a new generation of large, affordable, and reliable drives

The Intel® SSD D5-P4320 delivers big, affordable, and reliable storage to the warm data tier. With 33% more bits per cell than TLC,² the D5-P4320 drives will enable 3x storage consolidation³ compared to hard disk drives (HDDs), leading to lower operational costs. As the industry's first PCIe*-enabled QLC drive for the data center, the D5-P4320 provides the ability to scale to large capacities and deliver the performance needed for storage workload requirements.

Store More: Big Capacities Store Massive Quantities of Data

Aerial density describes how many bits of data are stored in a given square millimeter of storage media. The Intel® SSD D5-P4320 with QLC technology offers an aerial density advantage of 33% more bits per cell than the prior generation of Intel® 3D NAND. The result? Higher capacity, cost-effective PCIe drives optimized for read-intensive storage workloads. The D5-P4320 is currently available in a U.2 form factor with 7.68TB capacity. Available for limited deployments is the larger capacity 15.36TB Intel® SSD D5-P4326 in the U.2 and EDSFF* "Ruler" form factors, making them ideal for bulk storage requirements.

Save More: High Density Reduces Operational Cost

Today's data center storage often relies on a mix of HDD and SSD technologies. The Intel® SSD D5-P4320 delivers high capacity and lower operational cost for the capacity or "warm" data storage layer traditionally served by hybrid or HDD arrays. With its higher density, Intel® QLC SSDs means fewer drives to support, power and cool. In addition QLC SSDs have a lower annual failure rate, which further reduces costs.

Do More: PCIe Accelerates Workloads at Large Capacities

All QLC-enabled SSDs are not created equal. In addition to massive capacities, the D5-P4320 is built on the PCIe* interface, which delivers higher maximum performance than the SATA interface. The D5-P4320 SKUs allow for much denser systems while enabling performance per TB to continue scaling well beyond SATA-based QLC SSDs. The Intel® QLC SSDs, when combined with Intel® Optane™ technology, accelerate the speed of frequently accessed data, at the price and capacity of massive storage.

1. Based on Intel achieving PRQ status of Intel® SD D5-P4320 on July 13, 2018
2. 33% more bits per cell. TLC (tri-level cell) contains 3 bits per cell and QLC (quad level cell) contains 4 bits per cell. Calculated as $(4-3)/3 = 33\%$ more bits per cell.
3. Consolidate storage footprint up to 3x. Based on 4TB 3.5" HDD - [WD Gold TB Enterprise class 7200 RPM](#) SSD configuration based on 7.68TB Intel® D5-P4320 QLC SSD: 3 2U nodes per 1PB - 1,106TB total using 144 7.68TB D5-P4320 SSDs; 48 2.5" SSDs per 2U node using 2.5" U.2 from factor; 3 2U nodes for 6U total. HDD configuration based on 4TB 3.5" HDD: - 10 2U nodes per 1PB - 960TB total based on 24 3.5" HDDs per 2U. Note that 4TB HDDs are used in this comparison as we are targeting "warm" storage meaning that a certain capacity is needed, but performance is also important and 4TB HDDs perform much better than larger capacity HDDs.
